

Testing Report - Application Health Check - SC_001

Report Timestamp: 07-10-2025, 22:45:55

Testing URL: <https://bigappmarket-dev.appiancloud.com/suite?signin=native>

Testing Environment: QA

Current Network Speed: Test Test

Test Introduction

To verify health of the application by clicking all buttons, tab, link texts, and navigating to different pages.

Test Methodology

The test methodology used in this performance test focusing on page load time to measure how quickly a web page loads at different section under various conditions, including different network speeds and user traffic loads. By analyzing the page load times across different sections of the application, the testing aims to pinpoint areas of optimization, such as server response time, content delivery, and front-end performance, ensuring that the page loads efficiently and provides a seamless user experience.

Test Summary

* To verify data input to username field

Result: Passed

Right click on image and select Open link in new tab

* To verify data input to password field

Result: Passed

Right click on image and select Open link in new tab

* Clicking Login button

Result: Passed

Right click on image and select Open link in new tab

* Clicking Home link text

Result: Passed

Right click on image and select Open link in new tab

Note:

1) Python version: 3.11

2) Jenkins version: 2.514
